Profile

I study Information and Communication Technologies at STU FEI in Bratislava and Computer Science in parallel at Dnipro University of Technology. Right now I'm building Python agents on top of GPT and Claude APIs, tools for evaluating LLM output, and n8n automation pipelines. Internships and junior roles in backend or AI-automation engineering.

Education

Slovak University of Technology (STU FEI)
Information and Communication Technologies, Bachelor's

Dnipro University of Technology
Computer Science, parallel Bachelor's

Selected projects

Task Tracker 2026
A project workspace with 35 REST endpoints and a drag-and-drop widget dashboard. 7 app screens; 3 integration test suites.
Java 21, Spring Boot 3, Spring Security + JWT, PostgreSQL, Flyway, React

KIZUNA v2 2026
A self-healing IPv6 mesh-routing protocol, validated on a 12-node Docker lab. 167 automated tests passing; ≈10.5k lines of Python.
Python, asyncio, UDP / IPv6 multicast, Pydantic, FastAPI, Docker Compose

Appointment System 2026
A clinic booking system where every appointment opens its own doctor–patient chat. 3 user roles; 29 REST endpoints; 7 service tests.
Java 17, Spring Boot 3, Spring Security + JWT, STOMP / WebSocket, H2 / PostgreSQL, React

ProstaPaper 2026
A RAKATHON prototype that fills a urologist's REDCap documentation from his records — and flags the errors it finds.
Document processing, LLM extraction, Cross-document checks, Human-in-the-loop review, REDCap

Hackathons

STU Ideathon — 3rd place
A digital twin that finds where university heating is wasted. We proposed a sensor network that collects data over a measurement period, builds a digital twin of the buildings and uses it to find where heat is lost or spent at the wrong time.

RAKATHON 2026 October 2026
ProstaPaper: REDCap documentation that checks itself (see Selected projects).

Huawei Seeds for the Future
A hub that connects many different smart devices, organises the data exchange between them and uses AI to improve how they work together.

More projects

Hybrid SEC-DED Decoder — An extended Hamming (8,4) decoder in Verilog that corrects single-bit errors and flags double-bit ones.

Study Group — A study-group app with realtime chat, shared tasks and files, built for Google Cloud.

Job Hunter Agent — An agent that scans five job boards, scores each listing with Azure OpenAI and shortlists the 7+/10 ones.

Video Editing Automation — A Claude Code skill that turns a voiceover into a captioned DaVinci Resolve edit.

Skills

Backend: Java 17/21, Spring Boot 3, Spring Security + JWT, REST & OpenAPI, SQL, PostgreSQL, H2, Flyway

AI & automation: Python, Azure OpenAI, Claude API, Prompt design, LLM output evaluation, n8n, Google Sheets API

Hardware & signals: Verilog, Testbenches, Hamming codes, BPSK + AWGN modelling, MATLAB

Frontend: React, TypeScript, Vite, Recharts, WebSocket / STOMP

Networks: IPv6, UDP, Link-state routing, Docker Compose labs, tc netem fault injection, pytest

Workflow: Git & GitHub, Linux, Docker, Google Cloud Run, Technical documentation
