Hardware & signals | Networks | Backend & web | Applications & AI

Right now

Building Python agents on GPT and Claude APIs, tools for evaluating LLM output, and n8n automation pipelines.

Education

Slovak University of Technology (STU FEI)
Information and Communication Technologies, Bachelor's

Dnipro University of Technology
Computer Science, parallel Bachelor's

Skills

Backend
Java 17/21, Spring Boot 3, Spring Security + JWT, REST & OpenAPI, SQL, PostgreSQL, H2, Flyway

Frontend
React, TypeScript, Vite, Recharts, WebSocket / STOMP

AI & automation
Python, Azure OpenAI, Claude API, Prompt design, LLM output evaluation, n8n, Google Sheets API

Networks
IPv6, UDP, Link-state routing, Docker Compose labs, tc netem fault injection, pytest

Hardware & signals
Verilog, Testbenches, Hamming codes, BPSK + AWGN modelling, MATLAB

Workflow
Git & GitHub, Linux, Docker, Google Cloud Run, Technical documentation

Profile

ICT student at STU FEI in Bratislava, with a parallel Computer Science degree at Dnipro University of Technology. I build across the stack: Spring Boot backends, React frontends, an IPv6 mesh-routing protocol, a Verilog decoder and Python agents on LLM APIs. Looking for internships and junior roles in backend or AI-automation engineering.

Selected projects

Task Tracker — Backend & web — 2026

A project workspace with 35 REST endpoints and a drag-and-drop widget dashboard.

- Spring Boot 3 + JWT backend: 35 REST endpoints, Flyway migrations, integration tests.
- React dashboard with drag-and-resize widgets, analytics charts and time tracking.

Java 21, Spring Boot 3, Spring Security + JWT, PostgreSQL, Flyway · github.com/TitovMykhailo/Task-Tracker

KIZUNA v2 — Networks — 2026

A self-healing IPv6 mesh-routing protocol, validated on a 12-node Docker lab.

- Binary protocol over UDP/IPv6 multicast with neighbor admission and backup paths.
- 12-node Docker lab with fault injection and gateway failover; 167 passing tests.

Python, asyncio, UDP / IPv6 multicast, Pydantic, FastAPI · github.com/TitovMykhailo/Kizuna-v2

Appointment System — Backend & web — 2026

A clinic booking system where every appointment opens its own doctor–patient chat.

- Slot generation from doctor schedules with conflict checks; three user roles.
- Each booking opens a STOMP/WebSocket chat with the doctor's automatic message.

Java 17, Spring Boot 3, Spring Security + JWT, STOMP / WebSocket, H2 / PostgreSQL · github.com/TitovMykhailo/apointment-system

Hackathons

STU Ideathon — 3rd place

Sensors and a digital twin to cut faculty heating costs: body-heat-aware pre-heating, timetable-based and room-level heating.

RAKATHON 2026 — October 2026

ProstaPaper: reads a urologist's records, fills REDCap documentation and flags errors for the doctor.

Huawei Seeds for the Future

A hub that connects smart devices, organises their data exchange and uses AI to improve how they work.

More projects

Job Hunter Agent — Turns a noisy job feed into a scored shortlist.

Video Editing Automation — From a narration recording to a first cut in DaVinci Resolve.

Study Group — Chat, tasks and shared files for study groups.

Hybrid SEC-DED Decoder — Error correction in Verilog, from codeword to bit-error rate.
